

UNLOCKING POTENTIAL TOGETHER.

MAKING LOGISTICS A KEY SUCCESS FACTOR.

A BIT OF US.

BITO is a German manufacturer of Racking and Bins, **globally active with over 16 subsidiaries**. We like to present BITO Systems active in **Belgium and the Netherlands**.

What makes BITO unique is our long-standing expertise, our service principle of meeting customers on a level playing field, our passion for quality and pleasure in performance.

We have a long history of metal production and have more than 60 years of experience in intralogistics.

We produce in Germany and Poland a wide range of products which lead to smart solutions in tailor made projects. Meanwhile, we also developed many industry-specific solutions.

We approach the market dealing with small needs via the web-shop and via over 130 outdoor sales area representatives. We daily are in contact with end-users. We have a team of account managers for larger distribution organisations. We partnered up with many system integrators, contributing to global large size projects.

Our products and solutions are trend setting, following and evoking the fast evolution in the intra-logistic world. This both in racking solutions and a wide variety of plastic bins.

Our plastics division answers to the need for sustainable solutions **for storage bins, picking and transport bins**, and follows the need in the goods-to-person trend with adequate load carriers.

This introduction brochure has the objective to present BITO and to invite you to share what we have to offer.

Let's meet and explore the horizon from today towards the future.

Carl Ronsse,

Managing director BITO Systems nv

YOUR CHALLENGES.

Today, companies face huge challenges in trying to optimise logistics processes.

We are basically specialists in our field, where we are daily faced with many challenges in a variety of industries.

Where you as an evolving organisation have needs to tweak your logistic apparatus, until you gain the insight to level up and either exchange a storage/picking zone with another solution or even explore to move to new premisses.

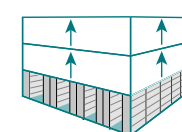

There might be different drivers. What we see is a growing number of SKU's, often products with a shorter life cycle, lower stock levels and need for more frequent replenishments. Operationally a growing demand for efficiency delivering in shorter time windows. And for sure the challenge of finding on a daily basis the right operational workforce.

We as BITO are often not the first to be contacted. Often our customers were first triggered by new software solutions, the new robot technology, etc. . But as a consequence, there is in many cases an impact on the racking, the optimisation of storage and picking zones, the use of load carriers etc. .

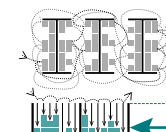

We are promoting modular solutions, which can grow and be adapted along the evolving future needs.

Every case has particular needs, but in the end, it is all about using space adequately, creating a flexible structured working environment with simple instructions towards the workforce leading to transparency, a predictable performance and a high service level.

When you are in the midst of a rethinking exercise, or you tell yourself, it is now the time to act, we are there to assist and start **unlocking the potential together**.

REDUCE WASTED SPACE
BY INCREASING THE
HEIGHT OF STORAGE.

GAIN TIME BY
REDUCING PICKING TIME.

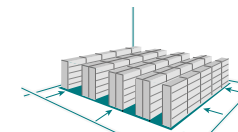

CREATE MORE PICK LOCATIONS
ON GROUND LEVEL.

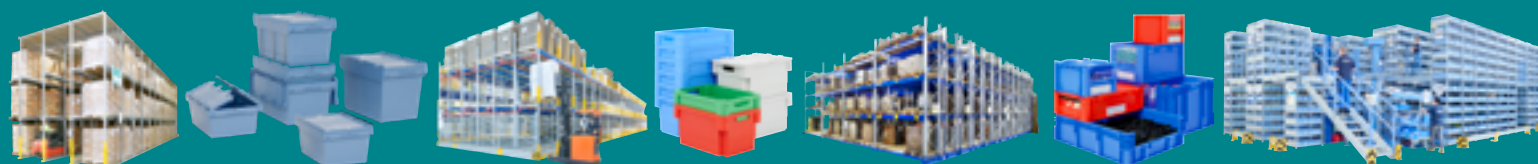

SPEED UP PROCESSES
WITH AUTOMATION.

IMPROVE PICKING PERFORMANCE
WITH BETTER ERGONOMICS.

GAIN SPACE BY
OPTIMISING STORAGE.

A BIT OF SOLUTIONS.

WE MAKE LOGISTICS A KEY SUCCESS FACTOR FOR YOUR BUSINESS.

Logistics involves all corporate processes from goods receipt over buffering between production processes, providing goods along assembly lines, storage, order picking and to dispatch.

Our wide product range and strong partnerships enable us to provide our customers with impartial advice in terms of technology and brands.

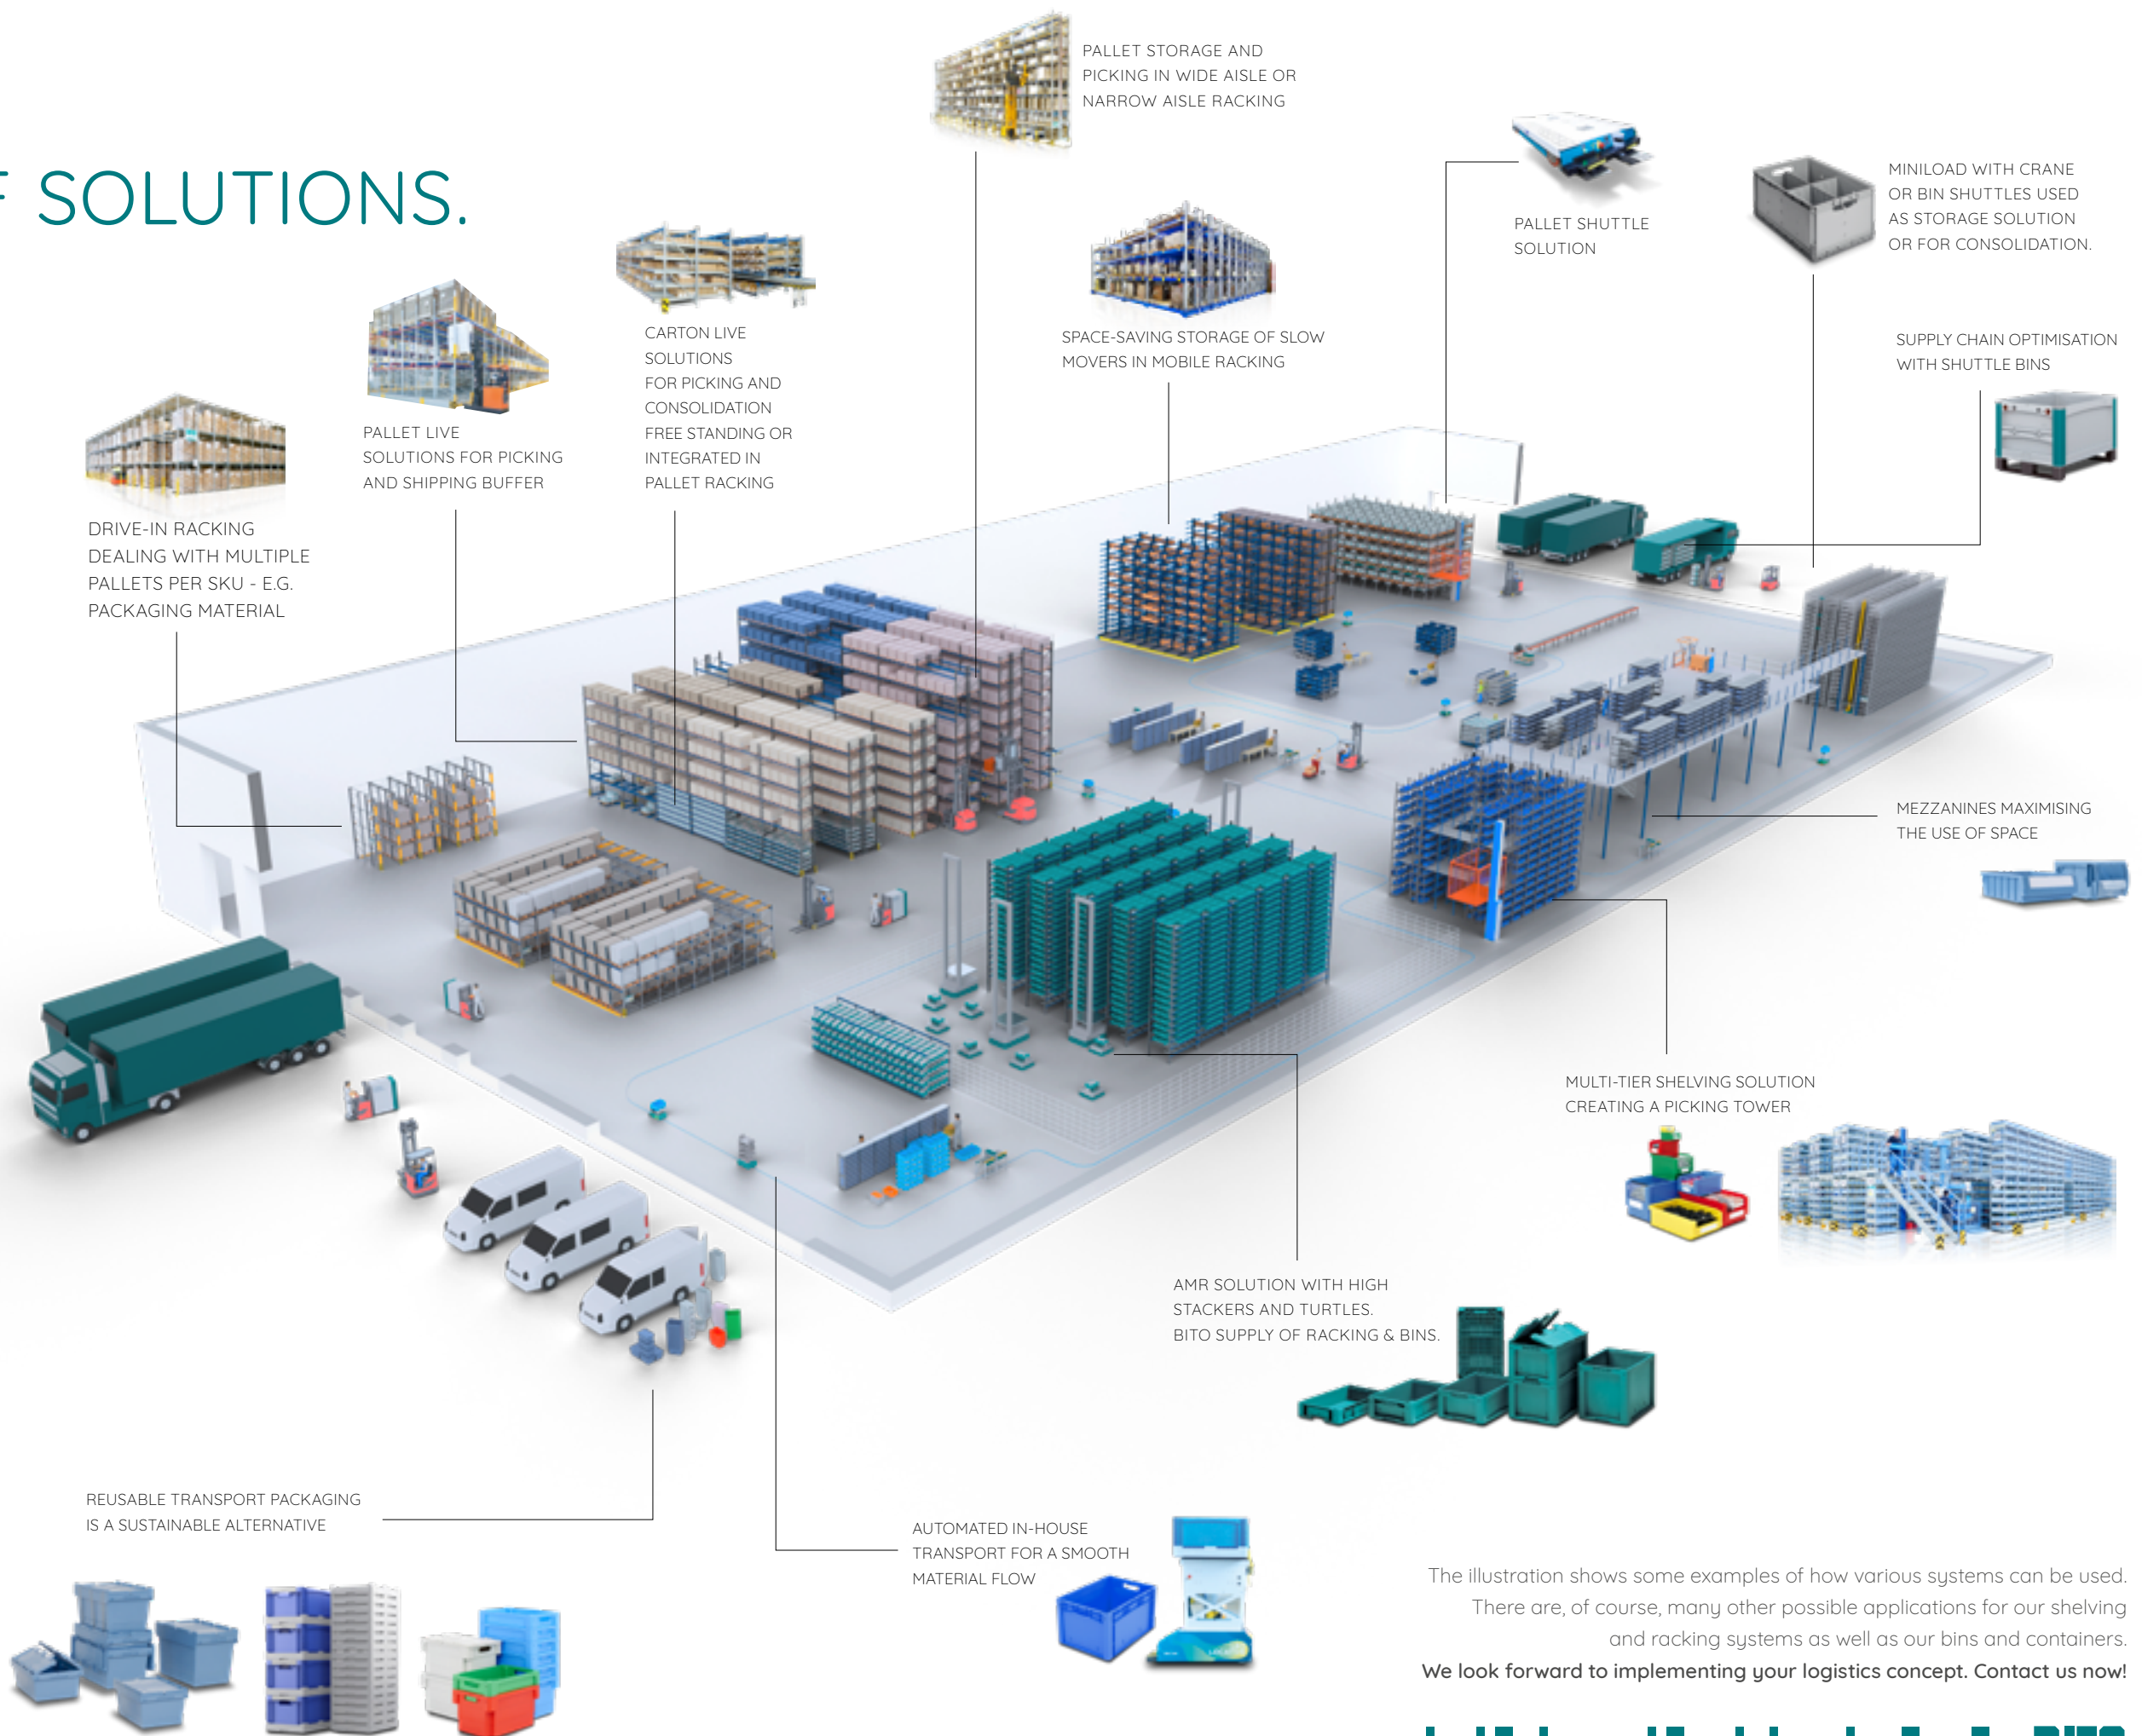

Whether you need to handle individual products, binned goods or palletised loads, we find the optimum solution for every process requirement.

From manually operated warehouses to automated solutions.

Whether with the extensive BITO portfolio or with our long-standing partners such as system integrators for complex automation projects, we will work out the right solution for every need and every application.

At BITO you get the full service.

From the initial meeting to the implementation and further development of your existing solution, our sales representatives, industry experts, key account managers, service staff and a call centre provide you with a 360-degree support.

The illustration shows some examples of how various systems can be used. There are, of course, many other possible applications for our shelving and racking systems as well as our bins and containers. We look forward to implementing your logistics concept. Contact us now!

JOIN THE BITO WORLD OF MATERIAL STORAGE AND HANDLING.

AMR IN PIECE PICKING.

The use of robots leads to **fascinating solutions**. The solution can vary, but basically there is a storage area and a consolidation functionality. Either the items are locally picked out of the storage bins or the storage bins are being presented to picking stations.

MULTI-TIER STORAGE.

A large product mix on a small footprint.

In efficient organised order picking environments often a mix of different strategies and material handling equipment will achieve the optimal result.

PALLET RACKING SOLUTIONS.

The application concept how a pallet storage area is organised depends on many factors like the share of full pallet and broken pallets. Whether the break down of the pallets is organised locally in the aisles or not. All kind of solutions can be offered to increase the number of SKU's on ground level.

FLOWRACKS IN PIECE PICKING.

A well-designed process for optimal efficient order picking leads to a predictable performance. With low instruction needs the workforce can be directed to the variety of tasks in picking, replenishment etc. Flowracks reduce the walking time and ensure FIFO.

FLOW RACKS FOR PALLETS.

The application can either be:
- A production buffer.
- A storage system with multiple pallets per SKU with need for FIFO handling.
- A case with focus on high storage density.
- The application of consolidation of picked pallets in the shipping area.
- A two-bin solution for A-items in a piece picking area.

A BIT OF PLASTIC BINS.

BITO is a trend setting designer and manufacturer of bins and container series used for storage and picking in traditional person-to-goods environments and in automated goods-to-person applications.

The nestable and foldable containers fit into the process of picking, shipping and distribution to e.g. affiliates, optimizing the return transport. Recent series also have 600x400 internal size with opportunity for compartmentation.

Our invention of noise reduction on internal transport on conveyors has been well received by the market of system integrators.

We have meanwhile solutions with insulation inserts and cold packs used in the pharma world.

For on-line supermarkets we developed solutions for delivery totes also dealing with the cold chain.

A BIT OF SUSTAINABILITY.

FROM RECYCLED POLYPROPYLENE TO CIRCULAR POLYPROPYLENE.

Today most recycled PP originates from regrind material that is processed to regranulated PP. This has the disadvantage that colour variations need to be masked by colouring the material black or in the best cases a kind of grey. The mechanical strength of this material is reduced with about 10% compared to virgin material.

BITO as a pioneer started to use PP material which is generated out of waste material.

The process of producing this material is really state of the art and very refined.

Using this material is really a step up since the material is upcycled. We name it CIRCULAR PP.

This is really creating the ultimate sustainability. This is really fantastic since the material can be produced in particular colours and there is no loss in strength compared to virgin PP.

This is no fantasy. BITO applies already in the popular standard RK bins series.

THE WASTE HIERARCHY

BITO RK bins 100% Circular PP

Take a look at some examples of our industry-specific solutions.

PRODUCTION

PRODUCTION

Whether in production or assembly – expensive storage space requires compact storage. An integrated buffer store ensures reliable restocking and thus contributes to optimising processes and supply chains.

LAST-MILE DELIVERY

LAST-MILE DELIVERY

Customised and industry-specific reusable packaging solutions with plastic bins and containers are the hallmark of a sustainable, efficient and secure supply chain, especially on the last mile. The attractive design of your delivery bins in corporate colours and with your logo increases attention and makes your brand unmistakable.

HEALTHCARE + PHARMACEUTICAL SECTOR

PHARMACEUTICAL + HEALTHCARE SECTOR

Sensitive, high-quality products require transport conditions that ensure temperature control, 100% tracking and batches with clearly defined references, in order to guarantee highest safety and quality standards.

**FOOD &
BEVERAGE**

FOOD & BEVERAGE

Live storage solutions are ideal for large stocks with a high turnover rate. They ensure space-optimised and single-reference storage with direct access to all items. Strict adherence to the FIFO principle is particularly suitable for products with an expiry date.

LOGISTICS

LOGISTICS

A well-designed warehouse layout improves performance, efficiency and safety within the warehouse while offering maximum flexibility to respond to a changing product portfolio and seasonal fluctuations.

E-COMMERCE + WHOLESALE SUPPLIERS

E-COMMERCE + WHOLESALE SUPPLIERS

The right storage and picking solutions guarantee ergonomic working conditions and efficiency when both individual products and palletised loads have to be handled in the same place.

**SYSTEM
INTEGRATORS**

SYSTEM INTEGRATORS

The integration of partial solutions requires powerful technologies, compatible interfaces and global planning and processing expertise in order to reliably implement flexible and scalable logistics systems.

CUSTOMERS AROUND THE WORLD OPT FOR **BITO** AS THEIR PROJECT PARTNER.

OUR PLANTS.

BITO metal production - Meisenheim, Germany.

BITO bins production - Lauterecken, Germany.

BITO metal production - Zimna Wódka, Poland.

16 SUBSIDIARIES

AND MANY DISTRIBUTION PARTNERS

Ensure customer proximity and address regional requirements. International cooperation within the BITO Group enables us to leverage synergies.

400

MILLION EUROS

The growing number of customer projects every year reflects the high degree of customer satisfaction.

100%

FAMILY-RUN

As a medium-sized, owner-managed company, we believe that acting sustainably and maintaining long-term relationships with our customers and suppliers is very important.

ISO 9001:2015

Certification to ISO 9001:2015 as well as many other certificates underline our professionalism in maintaining quality standards in the interest of our customers.

SCOPE

1 + 2 CERTIFIED

Our clever solutions not only help our customers to save resources. We also make sure that our own value chain is climate-neutral.

175

YEARS
ON THE MARKET

Because our mindset and actions as a family business are geared towards a long-term perspective and our customers have been trusting us for many decades, BITO will continue to be a strong partner for you in the future.

1 FOUNDATION

With the BITTMANN Foundation, we support initiatives and associations in the areas of health, youth, science and culture.

A BIT OF GROUP FIGURES.

A BIT OF OUR LOCAL ORGANISATION.

100%

RELIABILITY

AAA bond rating, excellent liquidity with index 117 and risk class I are what distinguishes BITO quality beyond our products. For our suppliers, this means reliable co-operation and our customers can count on the successful completion of their projects.

1.300

EMPLOYEES

Our dedicated production and back-office teams, competent sales colleagues and experienced project managers are committed to the success of your projects across the globe..

1 CAMPUS

Our BITO CAMPUS, with its co-working space and a venture and investment unit, stands for innovation and start-up promotion.

FROM FIRST CONTACT TO LONG STANDING RELATION.

Supported by our area sales representatives and account managers.

Focus to end customers and system integrators.

PROJECT FULFILMENT.

Full service of assembly, site management and service after sales.

From small to XL projects.
